IYEA 2022

- Risk stratification
- Endoscopic management
- New endoscopic hemostasis
- Endoscopy timing
- Conclusion

Risk stratification scores of NVUGIB

Scoring system	Clinical parameters	Primary outcome
GBS	BUN, hemoglobin, SBP, heart rate, comorbidity	Need intervention
Rockall score	Age, SBP, heart rate, comorbidity, endoscopic findings, stigmata of recent hemorrhage	Mortality
AIMS65 score	Albumin, INR, Mental status, SBP, age	Mean length of stay/mortality

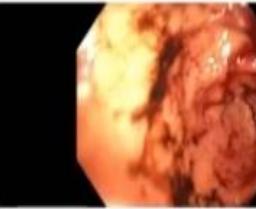

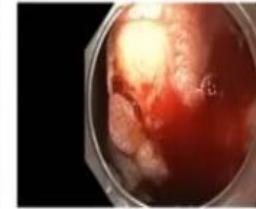

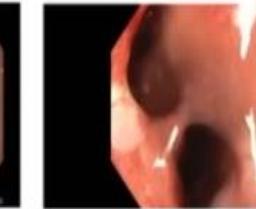

Blatchford O, et al. BMJ. 1997 Aug 30;315(7107):510-4

Rockall TA, et al. GUT 1996;38:316-21

Saltzman JR, et al. Gastrointest Endosc. 2011 Dec 74(6):1215-24

The Forrest Classification

IYEA 2022

Bleeding ulcers	Signs of recent hemorrhage SRH			Nonbleeding ulcers
Ia: spurting hemorrhage	Ib: oozing hemorrhage	IIa: nonbleeding visible vessel	IIb: adherent clot	IIc: flat pigmented spot
high-risk stigma, endoscopic therapy	high-risk stigma (?), endoscopic therapy	high-risk stigma, endoscopic therapy	remove the clot	III: clean base ulcer
				

For Forrest Ia, Ib ulcers
(spurting, pulsatile arterial bleeding, oozing)

“Combination Therapy”

Dilute epinephrine (1:10,000) inject 4 quadrants

Mechanical therapy
TTS clips
Cap-mounted clips

Contact thermal therapy
Bipolar, heat probe

Endoscopic management

IYEA 2022

Injection therapy	Mechanical hemostasis	Cautery hemostasis	Hemostatic powder spray
Diluted epinephrine (1:10,000 in NS)	Hemoclipping (endoclip)	Argon plasma coagulation (APC)	Hemospray™
Sclerosant	Band ligation	Photocoagulation (Nd:YAG laser)	EndoClot™ PHS
Cyanoacrylate glue	Detachable snare (endoloop)	Electocoagulation (BICAP)	Ankaferd® Blood Stopper
Fibrin sealant	Over-the-Scope clip (OTSC)	Thermal coagulation (Hemostatic forcep, Heater probe)	
	Endoscopic suturing		

- Classical methods
- New methods
- Rarely used methods

Over-the-Scope Clips

Actively bleeding
ulcers

Hemostatic powder spray

IYEA 2022

NAME	COMPOSITION	ACTION MECHANISM
Hemospray™	Mineral	Absorption of water Concentration of platelets and clotting factors Mechanical tamponade
EndoClot™ PHS	Absorbable hemostatic polysaccharide	Absorption of water Concentration of platelets and clotting factors Mechanical tamponade
Ankaferd® Blood Stopper	Mixture of plants	Encapsulated protein network → Erythrocyte aggregation around the network
Nexpowder	Biocompatible natural polymer	Modified of water absorption capacity using coating technology Reversible cross-linking of amine and aldehyde groups

Conclusion

IYEA 2022

- UGIB remains a health burden with significant mortality and morbidity
- Existing modalities are effective but outcome variable with operator dependent outcomes
- Hemostatic powders show promise with PUD and other indications ; ease of use, wide application area and repeatable
- Early endoscopy within 24 h of presentation was recommended because it significantly reduces the length of hospital stay and improves outcome.
